New Seeds:

More farmers should be trying some of the improved varieties of seeds. Take Cumberland clover, it is resistant to southern types of clover diseases, produces more as either hay or pasture and generally can be seeded for about 50 cents an acre above medium red clover. Now comes Kenland that shows equally as much superiority over Cumberland. Many could try an acre or two along side their regular seedings to find out how good it really is.

Then there is Buffalo and Ranger alfalfa. While not recommended for a one year meadow or pasture they are certainly superior for a two year stand where bacterial wilt damage occurs and much superior if the field is to be left for a longer time. Then Atlantic alfalfa is coming into the picture. It recovers more quickly after cutting or pasturing than others and is more tolerant to wilt than Common or Grimm.

Much of the same is true of oats, wheat, soybeans, hybrid corn and other seeds. Try improved varieties and strains in a small way the first year. The better crops will more than pay for the small increase in the cost of seed.

SEED CORN - SOYBEANS

There is plenty of time for delivery on seed corn and soybeans. The quality of corn is excellent, grading is uniform and all hybrid seed is treated for protection against seedling diseases found in the soil.

Monroe is the earliest variety recommended in Ohio. Four to five days earlier than Earlyana, yields as well and is stiffer stalked. Hawkeyes are equal to Lincolns in quality and yield, superior in standing, about one week earlier and are better suited where wheat is to follow. Lincoln is a high yielding, full season widely adapted variety and used where seeding wheat after beans is not a problem. The Black soybeans are suited for hay production and are finer stemmed and leafier than the yellow varieties.

EMERGENCY AND HAY PASTURE

Sudan grass, soybeans and millet are most widely used. Sudans are seeded at about 20 pounds, millet at 30 to 40 pounds and soybeans at 2½ bushels per acre. Sudan and millet should be seeded rather shallow and fertilized for satisfactory stands and vigorous growth.

COVER CROPS

Annual and perennial ryegrass, crimson clover, vetch and yellow sweet clover may be seeded alone or in mixtures. Seeded alone the recommended rates per acre are: Ryegrass 20 pounds, crimson clover 15 pounds, vetch 25-30 pounds and sweet clover 15 pounds. In a mixture each is used at about half the normal rate.

Seed Price List

April 17, 1950

"SCOTTS" grade is the highest quality seed available. It is carefully selected and thoroughly re-cleaned. Noxious weed free. May contain 0.10% to 0.25% other crop seed and in most cases will test 99.75% pure seed.

SPECIALS: The grades marked "Special" may be slightly off in appearance, lower in germination, or contain a small amount of other clovers or crop seed. This seed is clean and is perfectly safe to sow.

TREATED HYBRID SEED CORN

SCOTTS Hybrid Corn has been graded for width, length and thickness and will plant easily and accurately in any make of planter. Ohio certified Hybrids not listed are available upon inquiry.

The round kernels are graded uniformly and will yield just as well as the flats but special plates are usually required for accurate planting. All corn is treated for added protection against disease.

SCOTTS 66—One of the best medium maturing hybrids in the corn belt. Disease resistant, husks easily, strong roots, high yields on a wide variety of soils.

SCOTTS 75—Slightly earlier and not quite as tall as most of the C Hybrids, blight resistant, sturdy stalks, large dark yellow ears, bred for handy size and high yields.

Lancaster Sure Crop—\$5.50 bu.

SCOTTS 99—Maturity of U.S. 13 and bred for more corn borer resistance and higher yield. Dark green color. Not quite as tall as U.S. 13. Good sized, sound ears.

EARLY SILAGE BLEND—A blend of the earlier maturing hybrids for short season use. Seed is uniformly graded and above 90% germination. Will plant 8-10 acres per bushel. Blends available only in flat kernels.

LATE SILAGE BLEND—A blend of the later maturing hybrids recommended for full season planting. Slight variation in maturity gives higher yields of balanced quality feed. May be used for crib corn.
